                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Conservative
           /note-*Organ: mixed (see below); Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHPU, and fetal heart NbHHJ9W) were mixed, and se circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-345479, and 484488-489479.*

osteoclasts prepared from the long bones of 10 day old
rabbits. First strand cDNA was synthesized by priming
with an oligo(dT)-Not1 anchor-primer and second strand
with an oligo(dT)-Not1 anchor-primer and second strand
cDNA was synthesized by replacement synthesis as described
by Gubler and Hoffman (Gene 25:283, 1983). Following the
addition of Sal1 adapters and Not1 digestion, the cDNA was
cloned between the Sal1 (50) and Not1 (30) sites of the
pSPORT1 (BRL) plasmid vector."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Producing hybrid G-protein coupled receptors - mammalian DNA
requences encoding receptors having at least one domain replaced
by corresp. yeast domain used to transform yeast host cells
by corresp. yeast domain of the STE2 gene prod. contiguouslectides 2C2719 and 2C2720 (013383-84) were designed to
configuration of the STE2 gene prod. contiguouslectides 1-147 of the
x-terminal domain of the STE2 gene prod. contiguouslectides 1-147 of the
yeast G protein-coupled protein gene joined to nucleotides 103-136 of
the human G protein-coupled protein gene (see 013381).
The oligonucleotides, the beta2AR fragment and the pWNR1 vector
fragment were joined in a four-part ligation, to construct pHRS15.
From pHRS16, construct pHRS16 is produced encoding the human beta2-

producing hybrid G-protein coupled receptors - mammalian DNA
producing hybrid G-protein coupled receptors - mammalian DNA
producing hybrid greceptors having at least one domain replaced
property sequences encoding receptor was constructed by replacing the DNA
cc sequence encoding the extracellular N-terminal domain with a DNA
cc sequence encoding the extracellular N-terminal domain of the
cc sequence encoding the extracellular N-terminal domain of the
cc saccharomyces cerevisiae STE2 gene product.
cc construct pHRS17 comprises this sequence together with a TPI1
cc construct pHRS17 comprises this sequence together with a TPI1
cc transcriptional promoter and terminator. The construct is used to
cc transform yeast cells. For the detection of the presence of a ligand in
cc a test sample, the culture of the yeast cells may be exposed to the test
cc sample, under conditions allowing binding of the receptor and ligand.
cc expensive and labour intensive then previous methods and does not
cc expensive and labour intensive then previous methods and does not
contact exemples. For cell ines.

Oligonucleotides 2C2719 and 2C2720 (Q13383-84) were designed to Oligonucleotides 2C2719 and ECST2 gene prod. conty. nucleotides 1-147 of th N-terminal domain of the STE2 gene prod. conty. nucleotides 103-136 of the human G protein-coupled protein gene joined to nucleotides 103-136 of the human G protein-coupled protein gene (see Q13381). The Oligonucleotides, the betaZaR fragment and the pMVR1 vector fragment were joined in a four-part ligation, to construct pHRS16. From pHRS16, construct pHRS17 is produced encoding the human beta2-adrenergic-STE2 hybrid receptor. See also Q13381 and Q13383-83.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO9112273-A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           misc_rna
               Other examplary DNA sequences encoding hybrid G protein-coupled receptors are as follows: (1) the C-terminal internal effector domain is replaced; (2) the N-terminal extracellular and C-terminal internal effector domains are replaced; and (3) the N-terminal extracellular domain, the third internal effector domain and C-terminal extracellular domain, the third internal effector domain and C-terminal extracellular domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sledziewsk AZ,

This sequence encodes the protein of the invention. The protein of the invention is a beta-2 adrenalin receptor subtype with Kd value of approximately 75 pM against 125I-cyanopindrol. The protein can be used screening for agonists and antagonists, which are useful in researching asthmatic diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        문
                                                                                                                                                                                                                                                                                                                    Caning beta 2 and beta 3 adrenergic receptors and coding sequences - was full for identifying specific ligands and (ant)agonists to develop proper specific treatments for obesity in dogs of the canine beta 2-adrenergic constructed from polya+ RNA purified from dog brown adipose tissue cells. The sequence was a 600 bp fragment of the coding region of the human beta 3 cc constructed from polya+ RNA purified from dog brown adipose tissue cells. The probe was a 600 bp fragment of the coding region of the human beta-3 cc transmembrane domain 5 (TMS). The full length insert was cloned into M13 cc expressed e.g. in a mammalian cell, by subcloning into an expression vector such as pCDNA3. The beta-2 receptor can be used in comparative structure-function studies, e.g. for differential screening of ligands specific for RA-Ca-b2 or RA-Ca-b3 (W44933).

This sequence encodes the protein of the invention. The protein of the invention is a beta-2 adrenalin receptor subtype with Kd value of approximately 75 pM against 1251-cyanopindrol. The protein can be used screening for agonists and antagonists, which are useful in researching asthmatic diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    609/c
               This sequence represents a partial human nucleotide sequence that codes for EZA binding protein (EZA-BP, see #36815). It was isolated from a human aortic expression library using the bHLH domain of E47 as probe. EZA-BP is expressed in vascular smooth muscle cells; mRNA is preferentially expressed in the aorta. EZA-BP interacts with EZA proteins in vivo, binds to both E12 and E47 and inhibits binding of E47 homodimer to an E-box probe (see T97606). A full-length DNA sequence is given in T97610, and mouse (see T97611) and rat (see T97612-13) EZA-BP sequences have also been isolated. EZA-BP nucleic acids may be used in gene therapy and antisense methods for treating vascular diseases such as afteriosclerosis, to produce transgenic or knock-out animals,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotides encoding human secreted proteins - derived from e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pituitary, retina and colon cDNA libraries
Claim 1; Page 95; 641pp; English.

The present sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity,
                                                                                                                                                                                                                                                  inhibiting or stimulating growth of vascular smooth muscle cells, e.g. for wound healing or treatment of rheumatoid arthritis or retinopathic diabetes
                                                                                                                                                                                                                                                                                                                                                                     15-MAR-1996; US-013439.
